

Rohan Asudani

Tucson, AZ | 520-271-1351 | rohanasudani@arizona.edu | LinkedIn | GitHub | Portfolio

Education

University of Arizona, College of Science

B.S. Computer Science; Minor in Artificial Intelligence

Expected May 2027

Tucson, AZ

Honors & Activities: Dean's List; Global Wildcat Award; Google Developer Student Club; University of Arizona AI Club

Relevant Coursework: Machine Learning, Artificial Intelligence, Object-Oriented Programming & Design, Systems Programming, Programming Languages, Computer Vision

100xDevs Bootcamp 1.0

Project-Based Web Development, DevOps, AI/ML, and DSA Program

In Progress

Remote

Curriculum includes: TypeScript, React/Next.js, Node.js/Express, PostgreSQL/MongoDB, Docker, CI/CD, cloud deployment, PyTorch, Hugging Face, RAG, AI agents, MCP, LLM evaluation, and C++ DSA.

Experience

Arizona Online, University of Arizona

Incoming AI Research Software Developer

Starts Oct. 2026

Tucson, AZ

- Selected to develop an AI skills-mapping assistant for Corporate Partnerships, integrating University degree, employer, and market data to map academic outcomes to industry skill gaps.
- Planned interface will recommend relevant Arizona Online degrees, translate higher-education competencies into employer language, and visualize degree-to-skill relationships through interactive network-style views.

PawPrint Labs Inc.

Student Developer (Mobile Application)

Sep. 2026 – Present

Tucson, AZ

- Leading development of the mobile capture app for a UA-founded smart-collar startup, with planned BLE pairing, session recording, and synchronization of motion, sound, light, and temperature data for real-world beta testing.
- Working with the founder to turn functioning collar hardware and a proven first-cat behavior model into a low-friction owner workflow for data capture and behavior/wellbeing analysis.

FitArt Health and Wellness Pvt. Ltd.

Software Development Engineering Intern

May 2025 – Aug. 2025

Nagpur, India

- Contributed to a live app and web marketplace spanning 70+ fitness centers, testing and improving free-trial, contact, and program-detail flows across WordPress/WooCommerce, AJAX, and API integrations.
- Validated form submissions and end-to-end data flows, reproduced UI/API defects, and collaborated on fixes, contributing to a team-reported 20% reduction in reported bugs.

University of Arizona Information Technology Services

IT Web Analyst

Mar. 2024 – Present

Tucson, AZ

- Maintain, build, and QA University web properties across Drupal and WordPress, handling site migrations, responsive testing, link validation, accessibility reviews, and production content/UI fixes for academic and administrative units.
- Audit Arizona Online degree-search links and PDF accessibility in Adobe Acrobat, repair relative-path issues, cross-check academic program records, and document unresolved exceptions in shared QA workflows.

Projects

TermAgent – Terminal Coding Agent | Python, CLI, Git, OpenAI Responses API, Harbor

GitHub | Release

- Engineered and released a terminal coding agent that searches repositories, indexes Python/JavaScript/TypeScript symbols, previews patches, runs verification, and records token and estimated-cost telemetry in reproducible JSONL traces.
- Enforced repository confinement, SHA-256 planned-write checks, classified shell execution, approval modes, credential-file protections, and final-diff validation; shipped v1.0.1 with 198 passing tests and CI across Python 3.11–3.13.
- Built a frozen eight-task Harbor evaluation with independent graders and a matched Codex CLI baseline; measured 87% fewer input tokens, 25% lower total model cost, and 69% lower runtime while documenting completion tradeoffs and controller failure modes.

AI Model Router & Eval Platform | Next.js, TypeScript, PostgreSQL, Prisma, OpenAI Responses API

GitHub | Live Demo

- Built a full-stack LLM routing and evaluation platform that recommends models using task-specific quality, latency, context fit, and estimated cost, with manual overrides and budget-aware policy routing.
- Implemented PostgreSQL-backed prompt datasets, persisted evaluation runs, rubric-based LLM-as-judge scoring, team budgets, auditable routing decisions (allow, block, downgrade, escalate), and JSON/CSV savings exports.
- Deployed a public Vercel demo in mock mode; gated opt-in live OpenAI execution with server-only keys, admin checks, per-IP rate limits, payload validation, and production error redaction; CI runs 11 unit and 7 Playwright end-to-end tests.

PU Realtors Website | Web Development, SEO, Lead Generation, AI Automation

Live Site | Case Study

- Co-developed and iteratively optimized a responsive real-estate lead-generation site whose digital channel has contributed to INR 1.5+ crore (approximately US\$160K) in plot sales; built property pages, SEO content, comparisons, and WhatsApp/call conversion flows.
- Developing AI-assisted lead sourcing and outbound outreach workflows to qualify prospects, organize follow-ups, and automate parts of the sales pipeline.

Additional Projects: Reinforcement Learning Agents – Snake & Gridworld (Python, NumPy, Matplotlib; Q-learning, SARSA, approximate Q-learning; 98–100% success in later-stage Snake evaluations); **Interactive Planner (CSC 335)** (Java, JavaFX, MVC, JUnit; calendar/task manager with local accounts, themes, serialized persistence, save/load, and unit-tested model/controller workflows).

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, C, C++, HTML, CSS

AI/ML & LLM Systems: PyTorch, Hugging Face, NumPy, Matplotlib, RAG, LLM evaluation, AI agents, reinforcement learning, OpenAI Responses API

Web & Data: React, Next.js, Node.js, Express, REST APIs, JavaFX, Prisma, PostgreSQL, MongoDB, WordPress/WooCommerce, Drupal

DevOps & Testing: Docker, GitHub Actions/CI/CD, Git/GitHub, Linux/Bash, Vercel, Playwright, pytest, JUnit, accessibility QA
