

# ROHAN ASUDANI

Tucson, AZ | 520-271-1351 | [rohanasudani@arizona.edu](mailto:rohanasudani@arizona.edu) | [LinkedIn](#) | [GitHub](#) | [purealtors.in](#)

## SUMMARY

Computer Science student at the University of Arizona with experience building production web platforms, AI-powered applications, and developer tooling. Focused on full-stack engineering, LLM systems, and AI infrastructure, with experience supporting 100+ university websites and software used by real customers.

## SKILLS

**Languages:** Python, Java, JavaScript, TypeScript, SQL, HTML/CSS, C++

**Web/Backend:** React, Next.js, Node.js, Express, REST APIs, PostgreSQL, MongoDB

**AI/ML:** AI Agents, RAG, Evals, Reinforcement Learning, Q-learning, SARSA, PyTorch, Hugging Face

**DevOps/Tools:** Docker, CI/CD, Git/GitHub, Linux/Bash, Drupal, WordPress, Tableau, CRM, Lovable

## EDUCATION

### University of Arizona, College of Science

**Expected May 2027**

*B.S. in Computer Science; Minor in Artificial Intelligence*

*Tucson, AZ*

- Honors: Dean's List; Global Wildcat Award. Coursework: Software Development, Object-Oriented Programming & Design, Systems Programming & Unix, Computer Organization, Discrete Structures, Principles of Data Science, Artificial Intelligence, Data Ethics; in progress: Machine Learning, Computer Vision, Comparative Programming Languages.

### 100xDevs Bootcamp 1.0

**In Progress**

*Selected Current Topics: Web Development, DevOps, AI/ML, and DSA*

*Remote*

- Current topics include TypeScript, React/Next.js, Node.js/Express, PostgreSQL/MongoDB, Docker, CI/CD, cloud workflows, PyTorch, RAG, AI agents, evals, and C++ data structures and algorithms.

## PROFESSIONAL EXPERIENCE

### University of Arizona Information Technology Services

**Mar. 2024 – Present**

*IT Web Analyst*

*Tucson, AZ*

- Support and maintain 100+ University of Arizona web properties across Arizona.edu and sites.arizona.edu using Drupal and WordPress, improving accessibility, reliability, and user experience for multiple academic departments.
- Own site updates, redesign support, cloud migration tasks, and platform maintenance while coordinating with clients through Agile workflows, CRM-based support, and university web service standards.
- Conduct QA testing, troubleshoot CMS/front-end issues, validate releases, and use Tableau, CRM records, and internal reporting to prioritize fixes and improve site quality.

### FitArt Health and Wellness Pvt. Ltd.

**May 2025 – Aug. 2025**

*Software Development Engineering Intern*

*Nagpur, India*

- Developed and tested features for a health and wellness application, collaborating with engineering/product stakeholders to improve app and web workflows and reduce bug reports by 20%.

## PROJECTS

### Enterprise AI Model Router | *Next.js, TypeScript, PostgreSQL, Prisma* | [Code](#) | [Demo](#)

**2026**

*Full-stack AI infrastructure dashboard for company-side LLM governance, model evaluation, policy enforcement, and cost/savings reporting.*

- Built policy-aware routing with allow/block/downgrade/escalate decisions, persisted eval runs, LLM-as-judge rubric scoring, model comparison, team budget tracking, and CSV/JSON report exports.

### Terminal Coding Agent | *Python, CLI Tools, Git, OpenAI API* | [Code](#)

**In Progress**

*Benchmarkable terminal coding agent that inspects repositories, uses structured tools, previews diffs, enforces safety gates, and logs reproducible traces.*

- Implemented repo search, file read/write sandboxing, shell command policies, planned-write patch previews, OpenAI-compatible provider support, token/cost tracking, and an 8-task local benchmark harness.

### PU Realtors Website | *Lovable, Web Design, SEO, Lead Generation* | [Live Site](#) | [Case Study](#)

**2026**

- Co-developed a production real estate platform that generated qualified buyer leads and contributed to approximately 70 lakh INR (US\$82K) in residential plot sales through SEO, landing pages, and WhatsApp-driven conversion workflows.

### Snake and Gridworld Reinforcement Learning | *Python, NumPy, CSV Experimentation* | [GitHub](#)

**2026**

- Implemented Q-learning, SARSA, approximate Q-learning, random, and greedy agents from scratch, improving Snake reliability to 98–100% success across board sizes versus roughly 27–51% for tabular baselines.
