Tucson, AZ | 520-271-1351 | rohanasudani@arizona.edu | LinkedIn | GitHub | purealtors.in

Education

University of Arizona, College of Science

B.S. Computer Science; Minor in Artificial Intelligence

Honors: Dean's List; Global Wildcat Award

Activities: Google Developer Student Club; University of Arizona AI Club

Coursework: Software Development, OOP, Data Science, AI, Systems Programming, Machine Learning, Computer Vision

100xDevs Bootcamp 1.0

Project-Based Web Development, DevOps, AI/ML, and DSA Program

Intensive training in TypeScript, React/Next.js, Node.js/Express, PostgreSQL/MongoDB, Docker, CI/CD, cloud deployment, PyTorch, Hugging Face, RAG, AI agents, MCP, LLM evaluation, and C++ DSA.

Expected May 2027

Tucson, AZ

In Progress

Remote

Experience

University of Arizona Information Technology Services

Mar. 2024 – Present

IT Web Analyst

Tucson, AZ

- Support 100+ university web properties across Arizona.edu and sites.arizona.edu, updating Drupal and WordPress sites for academic departments and resolving production content and functionality issues.
- Translate client requests into documented web requirements and scoped tasks; coordinate redesigns, cloud migrations, and site changes through team checkpoints and a CRM-managed support queue.
- QA-test links, responsive layouts, accessibility, and CMS changes before releases; debug front-end defects against web standards.
- Use Tableau, CRM records, and internal reports to surface recurring support issues and prioritize work; write client-facing documentation and communicate status with nontechnical stakeholders.

FitArt Health and Wellness Pvt. Ltd.

May 2025 – Aug. 2025

Software Development Engineering Intern

Nagpur, India

- Developed and shipped app and web features for FitArt's one-membership marketplace spanning 70+ fitness centers, including center discovery, program details, free-trial inquiries, and contact flows.
- Collaborated with product and engineering to design and deploy scalable backend services; integrated and validated WordPress/WooCommerce data flows, Contact Form 7 submissions, and AJAX endpoints.
- Reproduced API and UI defects, debugged affected flows, and ran cross-platform regression and production-release checks, contributing to a 20% reduction in reported bugs.

PawPrints

Sep. 2026 – Present

Mobile Software Developer

Tucson, AZ

- Own mobile app development for a UA-founded smart-collar startup, designing owner-facing flows for pairing, session recording, sensor-data sync, and beta feedback.
- Translate motion, sound, light, and temperature signals from the hardware/ML prototype into iOS/Android capture workflows, onboarding screens, and data models.

Projects

Enterprise AI Model Router | *Next.js, TypeScript, PostgreSQL, Prisma*

Code | Demo

- Built and deployed an LLM evaluation and routing platform that ranks models by quality, estimated cost, latency, and context fit while enforcing team budgets and allow, block, downgrade, and escalation policies.
- Implemented prompt cases, PostgreSQL evaluation history, rubric-based LLM-as-judge scoring, policy audit logs, and reproducible JSON/CSV savings reports.
- Secured OpenAI Responses API workflows with server-side credentials, request validation, admin authorization, rate limits, and production error redaction; added unit, build, and Playwright end-to-end CI checks.

Terminal Coding Agent | *Python, CLI, Git, OpenAI Responses API*

Code

- Built a terminal coding agent that searches repositories, indexes Python, JavaScript, and TypeScript symbols, plans edits, previews patches, executes verification commands, and tracks token and estimated cost usage.
- Designed a tool-mediated safety layer with repository-bound file access, planned-write hashes, shell-command classification, approval modes, final-diff validation, and reproducible JSONL execution traces.
- Built reproducible Harbor/Terminal-Bench 2 evaluation tooling with frozen task hashes, independent graders, comparator runs, and failure analysis; validated orchestration with 176 automated tests and an 8/8 local fixture baseline.

PU Realtors Website | *Web Design, SEO, Lead Generation*

Live site | Case study

- Co-developed a production real estate site for property discovery and buyer inquiries; the digital lead channel contributed to approximately INR 70 lakh in plot sales.
- Structured mobile-friendly property pages, SEO content, trust details, and WhatsApp/call actions so buyers could compare projects and request a consultation or site visit.

Additional projects: CSC337 Web Programming final project; Snake/Gridworld RL (Q-learning, SARSA, approximate Q-learning; 98–100% Snake success in later runs).

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, C++

Web and data: React, Next.js, Node.js, Express, REST APIs, PostgreSQL, Prisma, MongoDB, Drupal, WordPress

AI/ML: LLM evaluation, AI agents, RAG, reinforcement learning, Q-learning, SARSA, PyTorch, Hugging Face

DevOps/tools: Docker, CI/CD, Git/GitHub, Linux/Bash, Playwright, Tableau, CRM, Lovable

AI-assisted development: OpenAI Codex, Claude Code, Antigravity
